

Whiplash

Healing a Pain in the Neck

Hope Bentley

Getting rear-ended in traffic. Face-planting at the bottom of a ski slope. Tumbling over the handlebars on your bike. Whiplash comes in many forms and can become a long-term problem if not treated correctly. Fortunately, massage and bodywork can address the ache and discomfort that come with whiplash and prevent chronic pain down the road.

Understanding Whiplash

The term "whiplash" came into use in 1928. Doctors will sometimes use "hyperextension injury," to describe it, but "whiplash" is a more visceral account of what has happened to the victim's

Car accidents are the most common causes of whiplash. The American Academy of Orthopedic Surgeons reported that about 20 percent of people who have been in rear-end collisions later report whiplash symptoms. Whether front to back or side to side, whiplash can affect muscles all the way into the victim's back and arms. The most serious form of whiplash compresses nerves in the neck and cause multiple sprains of the ligaments.

The good news is, serious hyperextension injuries are in the minority, as whiplash usually comes in the less serious version of the injury. "Fortunately, about 95 percent of the time whiplash tends to be more

Whiplash injuries can lead to headache as well as neck, jaw, and back pain.

neck. The neck itself has made a whip-like motion bending first towards and then away from the point of impact. As the head moves rapidly in one direction, the muscles in the neck receive the message to contract. The momentum of the head can cause strain or sprain to the muscles and ligaments in the neck as the head reaches the end of its movement.

superficial damage, like slight muscle strains and tears," says Ben Benjamin, Ph.D., a massage therapist who holds a doctorate in education and sports medicine. But whether the pain is minor soreness or serious discomfort, massage can provide relief and prevent chronic problems in the long run.

Whiplash Symptoms

The symptoms of whiplash include neck pain and stiffness, headaches, pain in the shoulder or between the shoulder blades (sometimes called "coat hanger pain"), low back pain, and pain or numbness in the arms or extremities.

Often people who suffer whiplash do not feel the effects until two or three days after the injury-causing incident. Benjamin explains that this delayed onset is because it takes time for scar tissue to manifest in the sprained or strained muscles and ligaments. And because scar tissue is more adhesive than regular tissue, people experience it as stiffness in the injured areas.

Whiplash affects primarily the neck, but victims shouldn't ignore the rest of the body. This injury can pull the long muscles on either side of the spine, which reach all the way to the tailbone and can cause discomfort along the way. Discomfort or stiffness in the chest and arms can also be due to whiplash. And headaches may be the result of slowed circulation to the head caused by the swelling in the injury.

Massage Can Help

Any massage that causes a general relaxation of the client's muscles can help relieve muscular pain in common types of whiplash injuries. In addition, massage increases the amount of oxygen that reaches the healing tissues and opens those tissues so they can receive oxygen and nutrients, thus speeding the healing process.

In addition to relaxation massage, specific bodywork methods ease acute whiplash discomfort and help prevent chronic fallout. For example, myofascial approaches restore fluidity to the fascia--normally a slippery tissue that surrounds all the moving parts inside the body--allowing freer movement of muscles and ligaments. Friction-based massage helps break up scar tissue and relieve stiffness. Trigger point therapy works by releasing tension held in tight knots of muscle. And any type of bodywork that stimulates circulation helps ease and prevent headaches.

Finally, the incident that caused the whiplash in the first place, (a car wreck, for instance) can be traumatic. Massage

helps relax a client's psyche as well as their muscles, helping her or him work through the emotional issues induced by the accident.

Because the neck is such a delicate part of the body, it is important to proceed with caution. Benjamin advises waiting a few days after the accident to seek treatment. This allows the initial scar tissue to knit, which is an important part of the healing process. The initial treatment should be extremely gentle, and if there is a chance of a fracture, a concussion, any disc problem or other serious injury, the client should make sure to see a physician first.

Let the Healing Begin

It used to be that physicians would immobilize whiplash injuries with a cervical collar, but now health care professionals advise a more temperate course for their patients.

"I recommend gentle neck movement within your range of motion while lying on a pillow," says Benjamin. Movement may help prolong the benefits of the massage by continuing to circulate blood, oxygen, and nutrients through the healing tissue. "Heat or cold, whichever feels better, can also help," says Benjamin. "Soaking in a hot bath can also be beneficial." Limiting physical activity for a few days and getting plenty of rest in the wake of a whiplash injury is also a good idea.

Whiplash is traumatic and should be addressed soon after the injury to avoid any chronic problems. If you or someone you love is suffering from the repercussions of whiplash, consider a bodywork session to ease the discomfort. Massage can help lessen muscle pain, induce relaxation, and ease the trauma often associated with whiplash. You'll be back to your old self in no time.

Bodywork has an arsenal of methods to treat whiplash injuries for a full recovery.

Lavender

An Essential Oil for Fundamental Health

Laurie Chance Smith

Lavender essential oil is a one-stop medicine chest, helping to reduce anxiety, fatigue, and stress and balance hormones, increase the immune response, lower blood pressure, and relieve pain. To utilize lavender's healing benefits at home, mix five to 10 drops of lavender essential oil in one ounce of jojoba oil or unscented lotion. (Essential oils shouldn't be applied directly to the skin; it's best to partner them with a carrier oil, liquid, or lotion.)

EARACHES

For earaches, dab one drop of lavender massage oil behind the ear and rub gently. Alternatively, place one drop of lavender oil on a cotton ball and carefully place inside the outer ear.

HEADACHES

Inhaling lavender is also effective for headache relief. Add a few drops to a bowl of warm water and breathe. Gently rub lavender massage lotion on the temples, forehead, and base of the neck.

COLDS

Lavender oil can also help break up coughs and clear sinuses. Colorado-based holistic aromatherapist Nicola McGill suggests the regular home-use of antiseptic essential oils such as lavender to help avoid colds and other infectious diseases. Add a few drops to a vaporizer to help clear colds and infuse the home with lavender's scent.

STRESS

At night, six to eight drops of lavender added to a warm bath helps melt away stress and relieve fatigue. Blend a footbath by adding three drops of lavender to a bowl of warm water, sink your feet in, and relax. For help inducing sleep, add two or three drops of lavender essential oil to the underside corner of your pillow.

TRANQUIL AROMA

A human takes 23,040 breaths a day, and each inhale floods the system with scent. Rely on lavender's tranquil aroma to clear the way toward peaceful days.

Lavender is loaded with wellness properties.

Exercise Myths

Fiction Vs. Fact

Although old fitness fictions like "no pain, no gain" are fading fast, plenty of misconceptions still exist. Following are some of the most common myths, counteracted by the latest research.

FICTION: YOU WILL BURN MORE FAT IF YOU EXERCISE LONGER AT A LOWER INTENSITY.

FACT: The most important focus in exercise and weight control is how many calories are burned during the activity. The faster you walk, step or run, the more calories you use per minute. However, high-intensity exercise may be more difficult to sustain.

FICTION: IF YOU'RE NOT GOING TO WORK OUT HARD AND OFTEN, EXERCISE IS A WASTE OF TIME.

FACT: Any exercise is better than none. For example, regular walking or gardening for as little as an hour a week has been shown to reduce the risk of heart disease.

FICTION: IF YOU EXERCISE LONG AND HARD ENOUGH, YOU WILL ALWAYS GET THE RESULTS YOU WANT.

FACT: In reality, genetics plays an important role in how people respond to exercise. Your development of strength, speed, and endurance may be very different from that of other people you know.

FICTION: THE HEALTH AND FITNESS BENEFITS OF MIND-BODY EXERCISE LIKE T'AI CHI AND YOGA ARE QUESTIONABLE.

FACT: The benefits abound! T'ai Chi,

for example, has been shown to help treat low-back pain and fibromyalgia. Improved flexibility, strength, and stress management are just some of the benefits.

FICTION: HOME WORKOUTS ARE FINE, BUT GOING TO A GYM IS THE BEST WAY TO GET FIT.

FACT: Some people find it easier to stick to a home-based fitness program. In spite of all the hype on trendy exercise programs and facilities, the best program for you is the one you will participate in consistently.

MESSAGE TO OUR CLIENTS

Thank you for taking time to read this newsletter, gaining further insight into the benefits of massage therapy. It has been our pleasure here at ABLC to be able to work with so many amazing people who allow us into their lives and help them achieve the balance they want out of life. Enjoy the articles, there are many more to come.
